

# Mini Pre-Work Python Challenge: "Coffee Countdown"

**Goal:** Practice variables, input, math, and printing.

---

## Challenge:

Write a Python program that:

1. Asks the user **how many cups of coffee** they drink in a day.
  2. Ask **how many days** until the workshop.
  3. Calculates and prints **the total cups of coffee** they'll drink before the workshop.
- 

## Example Output:

```
How many days until the workshop? 3
Day 1 - How many cups of coffee did you drink? 2
Day 2 - How many cups of coffee did you drink? 5
Day 3 - How many cups of coffee did you drink? 4
Total coffee before the workshop: 11 cups
Steady fuel for the big day! 
```

---

## Skills That You'll Practice:

- **Variables** and number types
- **for loop** iteration
- **if/elif/else** conditions
- **User input** inside a loop
- Basic accumulation with **+=**
